

A Centralized Platform for Educational and Career Opportunities

Explore internship and job opportunities in one place.

EXPLORE

Our project is a centralized platform that gathers academic and career opportunities in one place, helping students quickly find relevant internships, courses, research programs, and projects through personalized profiles and AI-based recommendations while avoiding missed deadlines.

Why Choose Us?

- ✓ All opportunities in one platform
- ✓ AI-based personalized recommendations
- ✓ Deadline reminders
- ✓ Only active and updated listings
- ✓ Less time wasted searching
- ✓ Real user experiences and feedback
- ✓ Helpful for students' career growth

Functional Requirements

User Registration & Login

Users can create an account and log in with email and password.

Personalized Opportunity Feed

The system shows internships, jobs, scholarships, courses, summer schools, and research programs based on the user profile.

AI-Based Recommendations

The system recommends the most relevant opportunities using user interests, profile data, and past interactions.

Search & Filtering

Users can search and filter opportunities by location, date, event type, and required skills.

Favorites List

Users can save opportunities to view or apply later.

Functional Requirements

Email & Push Notifications

Users receive notifications when new matching opportunities are posted.

Deadline Reminder

The system reminds users 24 hours before the deadline of saved opportunities.

Schedule Conflict Prevention

Users cannot register for two trainings at the same date and time.

Experience Sharing

Users can share feedback about programs they attended.

Review Access

Users can read reviews from people who previously joined similar programs or opportunities.

Non-Functional Requirements

Fast Loading Time

Opportunity listings should load within 3 seconds.

Mobile Compatibility

The system should work smoothly on Android 15+ and iOS 17.0+ devices.

Multi-Language Support

The platform supports Turkish, English, German, and Spanish.

Privacy Compliance

The system must comply with KVKK and GDPR.

Data Security

User data and login credentials must be encrypted.

Non-Functional Requirements

Quota Notification

If an opportunity is full, the system shows a “Quota Full” message within 2 seconds.

High Availability

The system should provide at least 99% uptime with health-check and auto-restart scripts.

Bot Protection

Human verification and rate-limiting prevent fake accounts and spam reviews.

Concurrent User Support

The system should support at least 1000 users at the same time.

Accessibility

The platform should follow WCAG 2.1 accessibility standards.

Stakeholder Analysis

Main Stakeholders

End Users

Benefit from easier access to personalized academic and career opportunities.

Universities & Educational Institutions

Promote their programs and reach a wider student audience.

Platform Administrators

Manage the platform and ensure smooth system performance.

Government & Regulatory Authorities

Ensure privacy, security, and legal compliance.

Companies & Employers

Find qualified candidates for jobs, internships, and programs.

Development Team

Gain technical experience, recognition, and career growth.

Stakeholder Analysis

Supporting Stakeholders

External Content Providers

Increase visibility and traffic for their opportunities.

Project Sponsors / Investors

Gain value from the platform's growth and success.

Rival / Competitive Businesses

Are affected by the platform's success in the market.

Alumni & Experienced Users

Share experiences and help users make informed decisions.

Data / Statistic Organizations

Analyze educational and career trends using platform data.

Advertisers / Marketing Firms

Reach a targeted audience interested in education and careers.

SOFTWARE PROCESS MODEL

SCRUM

Scrum is an agile project management framework that focuses on collaboration, flexibility, and continuous improvement throughout the development process. In our project, Scrum helps the team manage tasks efficiently by dividing the work into sprints and delivering features step by step.

Product Owner

Defines priorities and manages requirements

Scrum Master

Supports the team and ensures the Scrum process is followed

Development Team

Develops and implements the platform features

Scrum Practices

Sprint Planning

Daily Meetings

Reviews

Retrospectives

These practices help improve communication and ensure the successful development of our educational and career opportunity platform.

Sprint 1 – System Foundation

16.02 – 25.02

- Database Design & Planning
- Opportunity Data Setup
- User Registration & Authentication
- Role & Access Management
- API Integration Research

Sprint 2 – Core Features

26.02 – 05.03

- Search & Filter System
- Personalized Feed System
- Application Tracking System
- Favorites / Bookmark System
- User Profile Management

Sprint Planning

Sprint 3 – Smart Features

07.03 – 18.03

- AI Recommendation Engine
- Notification System
- Deadline Reminder System
- Duplicate Application Prevention
- Analytics & Reporting System

Sprint 4 – Final Development & Testing

19.03 – 30.03

- Review & Feedback System
- Interview & Video Interaction System
- Multi-Language Support
- Advanced Security & Data Protection
- Testing

Sprint Planning

SCHEDULE AND EFFORT

Key Points From the Project Schedule

- Development process divided into 4 structured sprints
- Task dependencies and workflow order were considered
- Project duration: 42 workdays
- Timeline: 16 February 2026 – 30 March 2026

PROJECT RiSKS

Why We Analyze Risks?

- To ensure platform reliability and data quality
 - To identify technical, security, and operational threats
 - To prepare proactive solutions before problems affect users
 - To improve user satisfaction and overall system performance
- 
- 

HIGH-PRIORITY RISKS

Top Risks Identified

- Inconsistent Data Sources: Data from different sources may be incompatible or inconsistent.
- Opportunity Normalization Failure: Data cannot be standardized into a common usable format.
- AI Recommendation Inaccuracy: The AI system may suggest irrelevant opportunities.
- Duplicate Detection Complexity: Same opportunity may appear differently across sources.
- Performance & Scalability Issues: System may slow down under high user load.
- Incorrect Opportunity Matching: System may incorrectly merge different opportunities.

SOFTWARE TOOLS

“Technology Stack & Tool Selection”

- Different software tools were evaluated for each system component. The selected technologies were chosen based on functionality, cost, scalability, integration capability, and ease of development.
-
- Cost Efficiency
 - Scalability
 - Integration
 - Functionality
- 
- 

SOFTWARE TOOLS

Task

Selected Tool

Development of the Mobile App Using Flutter	Android Studio
Database Management System	PostgreSQL
Location Filtering	PostGIS
Backend Framework	NestJS

WHY THESE TOOLS?

Selection Criteria & Justification

- Cost Efficiency: Most selected tools are open-source and reduce project expenses
- Scalability: The selected technologies support future system growth.
- Integration: All tools work well together within the same architecture.
- Functionality: The tools provide strong technical capabilities for project requirements.
